Connecting/Disconnecting Boat Battery

Before using pontoon boat, you’ll need to connect battery.
Before leaving cabin, battery must be disconnected.

Boat battery is located in back compartment under stern corner pad. It is disconnected while we are not at cabin.

Pad lifts up with hinges at back.

Red wires (2) will be disconnected from positive battery terminal. Remove hex-nut off of terminal bolt with pliers, and install small wire and then large wire on top, back onto terminal.

Replace hex-nut back on terminal bolt, on top of wires. Tighten hex-nut with pliers.

You won’t need insulation gloves or pliers to remove replace hex-nut.
If you use pontoon boat, please remove positive wires from battery before you leave cabin.
